BlueJeans

BlueJeans Rooms featuring Dolby Voice Room Pro

The simplest and smartest video meetings for your large conference rooms

BlueJeans Rooms featuring the Dolby Voice Room Pro is an end-to-end, meeting room solution specifically designed to bring intelligence and simplicity to your large conference rooms. This all-in-one solution features the Dolby Voice Camera Pro, the Dolby Voice Hub and the Dolby Conference Phone.

Ultra-modern, fully featured PTZ camera

The Dolby Voice Camera Pro, an ultra-modern PTZ camera, includes a dual camera system to give virtual meeting attendees the most engaging experience when on-site participants are based in large or long conference rooms. The system uses a panoramic sensor to continuously monitor the room and provide data that powers the tracking camera, which features a 12x optical zoom and wide-range pan and tilt.

Intelligent video across the board

The Dolby Voice Camera Pro intelligently tracks and frames meeting attendees to ensure speakers are always front and center. Wide dynamic range (WDR) video mapping enables the Dolby Voice Camera Pro to improve the picture quality for participants in rooms with challenging lighting conditions. Whiteboard view allows participants to share their in-room whiteboard with a click of a button for easy and simple collaboration.

Stunning Dolby audio optimized for large spaces

Enhance the experience for both in-room and remote participants with the Dolby Conference Phone. Experience superior audio clarity with 360-degree long-range pickup of the entire room and voice

placement that presents individual voices from distinct locations. Additional satellite mics are available for greater control and broader voice pickup.

Easy for IT to deploy, monitor and manage

Easy installation and simple IT management minimizes setup costs and deployment time for all your rooms. Live meeting controls and room telemetry from BlueJeans Command Center gives you the controls required to run friction-free meetings in your most critical meeting spaces like executive board rooms and briefing areas. Additionally, centralized room management through BlueJeans Command Center improves efficiency throughout your organization with bulk provisioning, remote device monitoring, and real-time diagnostics.

KEY FEATURES

Intelligent Scene Framing
Automatically adjusts the framing of the image to show different people talking and avoiding frustratingly narrow or distractingly wide angles.

Whiteboard View
Offers remote participants a helpful, head-on view of the whiteboard when someone is writing on it, while ghosting out people moving in front of the board to aid in legibility.

Wide Dynamic Range (WDR) Video Mapping
Dynamically modifies screen appearance to account for different lighting situations and overcome the challenges that lead to a muddied or washed-out image.

Full-Room Pickup
Captures distant voices with best-in-class range to more effectively capture quiet or overlapping voices.

Dynamic Leveling
Continuously maps room sound to distinguish between talkers and noise, canceling out common room distractions like HVAC or projector noise.

Voice Placement
Presents each speaker's voice from a distinct location to make it easier to follow and understand the conversation.

MultiService
Dolby Voice Room offers MultiService support* so that users have the ability to join the meeting service of their choice — BlueJeans, Microsoft Teams, Zoom or Cisco Webex.

One-Touch Meeting Join
Initiate, join and manage meetings with one touch. Minimize time trying to make room equipment work.

Calendar Integrations
Integrate the room's meeting schedule with both Microsoft or Google calendaring systems to enable participants to quickly join a scheduled in-room meeting and eliminate scheduling conflicts.

Wired and Wireless Screen Sharing
Share screen content during video meetings wirelessly or use the HDMI input on the Dolby Conference Phone for a hardwire connection.

Purpose-Built Internet Appliance
Dolby Voice Hub runs a hardened purpose-built OS, conforming to enterprise-grade security requirements, and uses HTTPS and SSH with SHA256 digital certificates.

Remote Device Management
Provision, deploy, measure usage, and update hardware so it's efficient and easy for IT to monitor, while reducing costs and user problems.

BlueJeans Rooms-as-a-Service
Software, hardware and services in a single package

BlueJeans Rooms-as-a-Service brings together BlueJeans Rooms software, Dolby Voice Room or Dolby Voice Room Pro hardware, maintenance and support in an all-inclusive monthly price. This subscription service provides a simple way to outfit meeting rooms and huddle spaces with an integrated solution while avoiding time consuming hardware purchase cycles.
